Velkommen til Frisa Planter's nye katalog!

Med en årlig produktion af mere end 55 mio. småplanter, er Frisa Planter Skandinaviens førende producent af småplanter. Frisa Planter har igennem mere end 40 år leveret småplanter af høj kvalitet til professionelle gartnere. I dette katalog kan du se det spændende sortiment, vi har sammensat til den kommende sæson indenfor pottedplanter og udplantingsplanter. Desuden bistår vi gerne med vores ekspertise i produktudviklingen af nye kulturer. Frisa Planter ejes af Sakata Ornamentals Europe A/S, et selskab i den japansk ejede globale frøkoncern Sakata Seed Corporation.

Welcome to Frisa Planter's new catalogue!

With an annual production of more than 55 million plugs, Frisa Planter is Scandinavia's leading supplier of plant plugs. For more than 40 years, Frisa Planter A/S has been supplying high-quality plugs to professional nurseries. In this catalogue, you can see the exciting assortment we have composed for the coming season within pot and bedding plants. Further, Frisa Planter is very willing to make its expertise available for the product development of new cultures.

Frisa Planter A/S is owned by Sakata Ornamentals Europe A/S, a company within Sakata Seed Corporation, the Japanese-owned global seed group.

KÆRE FRISA KUNDE

Få den rigtige start på din produktion!

En ensartet færdigvareproduktion i høj kvalitet begynder med en ensartet småplante i en høj kvalitet. Stadig flere gartnere er kender at såning, spiring og dyrkning af småplanter er komplicerede processer, der bør overlades til en specialist som Frisa Planter. Frisa Planter har igennem mange år opbygget en omfattende ekspertise indenfor såning af forskellige frøtyper, dyrkning af ensartede og sunde småplanter, sortering samt levering.

Såning og spiring

En ensartet kasse småplanter tager sit udgangspunkt i en præcis såning og omhyggelig spiring. De færreste gartnerier har de fornødne faciliteter til at sikre en optimal udnyttelse af frøets spiringspotentialer. Frisa Planter råder over avancerede såmaskiner til maskinel præcisionssåning af de mange forskellige frøstørrelser og - former. Endvidere har Frisa Planter de fornødne faciliteter samt ekspertise til at sikre en optimal spiring. De optimale spiringsbetingelser varierer med arten, og hele spireprocessen kræver omhyggelig overvågning.

Optimale betingelser til småplanterne

For at sikre en god og ensartet udvikling af småplanterne opdeler Frisa Planter småplanternes dyrkning i flere stadier fra spiring til færdig småplante. I hvert enkelt af disse vækststadier er småplanterne sikret optimale vækstbetingelser - varierende med arten - via tilførsel af vækstlys, skygge, indviuel vanding samt anvendelse af computestyret klimakontrol- og gødnings-tilførsel. Næringsstofindholdet, ledetal og pH analyseres løbende i laboratorieanalyser.

For at sikre en god rodudvikling og dermed et stærkt rodsystem anvender Frisa Planter specialudviklede jordblandinger. Disse giver rødderne optimal adgang til ilt, vand samt næring, og gør det let at opvande rodklumpen efter potning. Hullerne i bakkerne - i kombination med den anvendte bordkonstruktion - sikrer at rødderne luftbeskæres, således at rodsammenvoksning undgås. Rødderne beskadiges derfor ikke unødigt ved prikling/potning, ligesom der ikke overføres eventuelle sygdomme fra en plante til en anden. Disse foranstaltninger er med til at sikre, at småplanten har de bedste forudsætninger for at komme hurtigt igang efter potning.

Sortiment

Frisa Planter tilbyder et tidsvarende sortiment af de bedste sorter indenfor frøformerede potteplanter og udplantningsplanter fra Sakata samt fra andre førende blomsterforædlerfirmaer i verden. I udvælgelsen af sortimentet er - udover dyrkningsvenligheden hos gartneren - også lagt væk på at forbrugeren kan have stor glæde af produktet. Hovedkulturer er: Gerbera, Primula, Viola, Ranunculus og Exacum. Desuden produceres et bredt sortiment i udplantningsplanter. Al produktion er ordrebaseret.

Frisa Planter bistår meget gerne med sin ekspertise i produktudviklingen af nye kulturer.

Faciliteter

Frisa Planter's småplanter produceres på to lokaliteter: Stige (10.500m²) og Skæring (6.000 m²). Faciliteterne råder bl.a. over mobilborde med trådnæt, klimacomputere, visionsorteringsanlæg, tilskudslys, skygge- og mørklægningsgardiner, vandingsbomme samt gødningsblandere. Frisa Planter's faciliteter er således optimalt udstyret til en rationel produktion af kvalitetssmåplanter.

Vision-sortering

Frisa Planter's småplanter vision-sorteres. Dette er med til at sikre, at Frisa Planter altid leverer fulde kasser med ensartede småplanter, og dermed det bedste udgangspunkt for en ensartet færdigvare.

Højt hygiejneniveau

Ved Frisa Planter er sundhed i centrum: Igennem hele produktionsprocessen fokuseres på god hygiejne. F.eks. sås kun i engangsbakker og alle CC-containere varmebehandles før de tages i brug i gartneriet. Endvidere anvendes biologisk integreret bekæmpelse med en løbende brug af nyttedyr og -svampe samt en rutinemæssig registrering af skadedyr. Dette sikrer, at Frisa Planter altid leverer sunde småplanter.

Kvalitetskontrol

Før en kasse småplanter forlader Frisa Planter gennemgår den altid en kvalitetskontrol. Dette er vore kunders garanti for, at de småplanter, der leveres, er sunde, stærke, ensartede og på det rigtige udviklingstrin - hver gang!

Bakketyper

Frisa Planter producerer i engangsbakker fremstillet i et miljøvenligt EPS materiale. Bakkerne ydre mål er tilpasset CC-containere, og bakkerne passer til de potterobotter, der anvendes på markedet. Frisa Planter tilbyder 3 kassestørrelser: 96-264-360 huls bakker. Bakkerne kan bortskaffes til den lokale forbrændingsanstalt.

Personale

Frisa Planter beskæftiger i højsæsonen 30 ansatte i produktion, administration og salg. Alle ledende personer samt salgskonsulenter er faguddannede, og har den nødvendige erfaring til at forestå den specialiserede opgave, det er at producere og sælge småplanter.

Levering

Frisa Planter's småplanter leveres på CC containere via professionelle blomstertransportører.

Ejerskab

Frisa Planter A/S ejes af Sakata Ornamentals Europe A/S, et selskab i den japansk ejede globale frøkoncern Sakata Seed Corporation.

DEAR FRISA COSTUMER

Get your production off to a good start!

Being able to produce uniform finished products of a high quality starts with uniform plugs of a high quality. An increasing number of growers acknowledge the fact that the sowing, germination, and cultivation of plugs are complicated processes which are ideally placed in the hands of a specialist business such as Frisa Planter. Over the years, Frisa Planter has built up comprehensive expertise about the sowing of different seed types, the cultivation of uniform and healthy plug plants, as well as gapping and delivery.

Sowing and germination

A uniform tray of plug plants starts with precise sowing and careful germination. Very few nurseries have the facilities at their disposal to ensure that the seeds germinate to their full potential. Frisa Planter operates state-of-the-art sowing machines which can handle the automatic precision sowing of many different seed sizes and shapes. Frisa Planter also has the facilities and expertise required to ensure optimum germination. The ideal conditions for germination vary according to seed type, and the entire germination process needs to be closely monitored.

Optimum conditions for plug plants

To ensure the healthy and uniform development of plugs, Frisa Planter divides the cultivation of the plug plants into several stages. In each of these growth stages the plugs enjoy ideal growing conditions – according to species – through the provision of supplementary lighting, shade, individual watering as well as the use of computer-controlled climate control and fertiliser feeding. Nutrient content, EC values, and pH are continually analysed through laboratory testing. To ensure good root development and thereby a sturdy root system, Frisa Planter uses specially developed soil mixes. These provide the roots with the right amounts of oxygen, water and nutrients, and make it easy to water the root ball after potting. The holes in the trays – combined with the bench construction – ensure that the roots are air-pruned, thereby preventing the roots from becoming intermeshed. The roots are therefore not unnecessarily damaged when transplanting/potting; likewise, any disease cannot be transferred from one plant to another. These measures help to ensure that the plugs have the best conditions to start growing quickly after potting.

Range

Frisa Planter markets a contemporary range of the best varieties of potted plants and bedding plants grown from seed supplied by Sakata and other leading flower breeders worldwide. In deciding on the range, just as it needs to be straightforward to grow from the nursery's point of view, it is important for Frisa that the consumer will derive considerable satisfaction and enjoyment from the product. The main cultures are Gerbera, Primula, Viola, Ranunculus, and Exacum. In addition, Frisa Planter produces a wide range of bedding plants. All production is to order. Frisa Planter is very willing to make its expertise available for the product development of new cultures.

Facilities

Frisa Planter's plugs are produced at two sites, in Stige (10,500 m²) and Skæring (6,000 m²). The facilities include mobile benches with steel meshing, climate computers, a vision-sorting system, supplementary lighting, shading and blackout blinds, watering booms, and fertiliser mixers. Frisa Planter's facilities are therefore ideally equipped for the streamlined production of high-quality plugs.

Vision sorting

Frisa Planter's plugs are sorted and gapped by a vision-sorting system. This helps to ensure that Frisa Planter always supplies full trays with uniform plugs, providing the best starting point for a uniform finished product.

High hygiene standards

At Frisa Planter, plant health is of crucial importance, and there is considerable focus on good hygiene throughout the entire production process. For example, seeds are only sown in disposable trays, and all CC containers are heat-treated before being used in the nursery. Moreover, the company uses integrated biological plant protection, regularly using beneficial insects and fungi and registering pests as part of its routines. This guarantees that Frisa Planter always supplies healthy plugs.

Quality control

Every tray of plug plants is quality-checked before leaving Frisa Planter. This is our customers' guarantee that the plugs we supply are healthy, strong, uniform, and at the right stage of development – every time!

Tray types

Frisa Planter uses disposable trays made from environmentally friendly EPS. The external dimensions are adapted to CC containers and the trays fit the potting robots used within the trade. Frisa Planter supplies plants in 3 tray sizes: 96, 264 and 360-hole trays. The trays can be disposed of at your local incineration plant.

Personnel

In the peak season, Frisa Planter employs 30 people in production, administration and sales. All key staff, as well as our sales consultants, is highly qualified and possesses the necessary experience to undertake the specialised task of producing and selling plugs.

Delivery

Frisa Planter's plugs are supplied on CC containers directly to the individual nursery by using an independent haulage company.

Ownership

Frisa Planter A/S is owned by Sakata Ornamentals Europe A/S, a company within Sakata Seed Corporation, the Japanese-owned global seed group.

BAKKER / TRAYS

OPTRYKKERE / PUSH-UP PLATES

Bakker

Bakkestørrelser

Frisa Planter tilbyder 3 bakkestørrelser:

360 huls - 264 huls - 96 huls

Alle 3 bakkestørrelser er tilpasset til CC-containere.

Frisa Planter producerer ikke småplanter i såkasser.

Antal planter der faktureres pr. bakke

Hvis planterne sorteres faktureres følgende antal:

360 huls bakke	350 planter
264 huls bakke	250 planter
	Gerbera, Exacum: 260 planter
96 huls bakke	95 planter

Bortskaffelse af bakker

Frisa Planter sår altid i nye rene engangsbakker.

Vore bakker er fremstillet i et miljøvenligt materiale: EPS.

Bakkerne kan bortskaffes til den lokale forbrændingsanstalt.

Optrykkere

Optrykkere gør det nemmere og mere skånsomt at få planterne ud af bakkerne.

Frisa Planter har sædvanligvis optrykkere på lager til vore 3 bakke-størrelser.

Alle optrykkere er i metal.

Efter endt brug kan ubeskadigede metaloptrykkere returneres, hvorefter vi krediterer det fakturerede beløb.

BEMÆRK: Hvis din nuværende metaloptrykker ikke kan anvendes til vore bakkestørrelser, bytter vi den gerne til en ny. Kontakt Frisa Planter eller spørg vores chauffør – han har sædvanligvis optrykkere med i bilen.

Emballage

Ønskes varerne pakket i bølgepapkarton med styroporindlæg, f.eks. hvor CC containere ikke er hensigtsmæssige, kan vi tilbyde at pakke i 2 kartonstørrelser:

Lille: H x L x B = 215 x 585 x 340 mm

Stor: H x L x B = 410 x 585 x 340 mm

Afhængig af planternes højde kan den lille karton indeholde 2 eller 3 bakker. Den store karton kan indeholde 4 eller 6 bakker.

Trays

Tray sizes

Frisa Planter offers 3 tray sizes:

360 holes, 264 holes, and 96 holes

All 3 tray sizes fit CC containers.

No. of plants invoiced per tray

If the plants are sorted, the following quantities are invoiced:

360-hole trays	350 plants
264-hole trays	250 plants
	Gerbera, Exacum: 260 plants
96-hole trays	95 plants

Discarding trays

Frisa Planter always sows in new, clean, disposable trays.

Our trays are made from environmentally friendly EPS.

The trays can be disposed of at the local incineration plant.

Push-up plates

Metal push-up plates make it easier to get the plants out of the trays and are gentler on the plants. Frisa Planter normally stocks push-up plates for our 3 tray sizes. All push-up plates are made from metal.

After you have finished using them, undamaged metal push-up plates can be returned, and we will credit the invoiced amount.

NOTE: If your existing push-up plate cannot be used for our tray sizes, we are always happy to replace it with a new one.

Packaging

If you would like your products to be packed in corrugated card with styropor lining, for example where CC containers are not practical, we offer packing in two sizes of cartons:

Small: H x L x W = 215 x 585 x 340 mm

Large: H x L x W = 410 x 585 x 340 mm

Depending on plant height, the small carton holds 2 or 3 trays. The large carton holds 4 or 6 trays.

96 (8 x 12) Huls/Hole
Ydre mål / Outside dimensions
(L x B x H/W) 53,5 cm x 4,6 cm x 31,0 cm

264 (12 x 22) Huls/Hole
Ydre mål / Outside dimensions
(L x B x H/W) 53,5 cm x 3,7 cm x 31,0 cm

360 (15 x 24) Huls/Hole
Ydre mål / Outside dimensions
(L x B x H/W) 53,5 cm x 3,7 cm x 31,0 cm

Optrykker i metal / Push-up plates in metal

CAMEO: Meget kompakt serie, der anbefales til dyrkning i 9-10 cm potter. Serien har et smukt grågrønt løv og ca. 3 cm store dekorative blomster. Serien behøver en kuldebehandling for at inducere blomstring.

CAMEO: A very compact series recommended for production in 9-10 cm pots. The series has a beautiful greyish-green foliage and approx. 3 cm large decorative flowers. The series needs a vernalization to induce flowering.

BEGONIA INTRO

Frisa Planter tilbyder et alsidigt sortiment i Begonia fra det allertidligste til det middeltidlige bakkessalg samt landskabs- og fyldte typer.

Frisa Planter offers a comprehensive assortment in Begonia for the earliest to the mid-early pack sales as well as landscape and fully-double series.

EMPEROR

Tidligste serie på markedet. Storblostmret.

Earliest series on the market. Large-flowered.

AMBASSADOR - SENATOR

Grøn- og mørkebladede markedsledende serier til det tidlige salg.

Green and darkleaved market leading series for the early sales.

ALFA

Til det middeltidlige salg. Serien har en mere kraftig plantevækst end Ambassador.

For the mid-early sales. The series has a more vigorous growth habit than Ambassador.

INFERNO

Bedste landskabs- og ampel type. Meget kraftigvoksende og vejrtolerant.

Best series for landscaping and hanging baskets. Very vigorous and weather tolerant.

QUEEN

Frø-formeret type med fyldte rosenlignende blomster.

Seed-propagated series with fully-double roselike flowers.

BEGONIA x HYBRIDA

Ny
New

BABY WING: En vedligeholdelsesfri Begonia med små drageformede blade. Den er mere opret end Dragon Wing og velegnet til udplantning, hvor den klarer sig utrolig godt over hele sæsonen under især varme betingelser. Den blomstrer 2-3 uger tidligere end Dragon Wing.

H: 30-40 cm

BABY WING: Maintenance-free Begonia featuring small DragonWing-shaped leaves and season-long performance in landscapes and containers. Like its Dragon Wing counterparts, BabyWing is extremely heat tolerant and handles stressful conditions well. BabyWing is more upright than Dragon Wing and flowers about 2 to 3 weeks earlier.

H: 30-40 cm

BEGONIA SEMPERFLORENS

Landskabsbegonia/Landscaping Begonia

INFERNO F1: Et unikt produkt, der forener en kompakt vækst i bakker og potter med en utrolig kraftig vitalitet i ampler og bede. Udplantet præsenterer Inferno sig flot p.g.a. sin høje vejrbestandighed, sit skinnende løv og sin evne til at blomstre overdådigt fra udplantning til frost. Mest velegnet til produktion i potter og ampler. H: 30 cm.

INFERNO F1: A unique product that combines compact growth in packs and pots with incredibly strong vitality in hanging baskets and patio containers and beds. When planted out, Inferno looks attractive thanks to its weather resistance, its shiny foliage and its profuse flowering from planting-out to the onset of frost. Most suitable for production in pots and hanging baskets. H: 30 cm.

SILVER FALLS: Fantastisk plante med små runde sølv blade på sølvstilke med kaskadelignende fald. Ideel til mixede ampler men også som enkeltstående plante eller som lav bunddække. Klarer sig godt under varme og tørre betingelser.

Kræver ikke knibning eller retardering.

H: 5-10 cm.

SILVER FALLS: Foliage plant covered with very small, rounded, silver leaves on silver stems with true cascading habit, making it an excellent choice for mixed containers or as a single hanging basket item. Also performs as a low-growing groundcover. Very heat and drought-tolerant.

H: 5-10 cm.

Emerald Falls
295026

EMERALD FALLS: Emerald Falls har medium grønne, runde blade tætteresiddende på stilken hvilket giver en tættere og kortere plant end Silver Falls. God til ampler og mixed packs eller potter, men gør sig også godt som lavt bunddække. Ingen brug for knibning eller retardering. H: 5-10 cm.

EMERALD FALLS: Emerald Falls has medium green leaves, more rounded and held closer to the stem which creates a denser, tighter and shorter plant than Silver Falls. Excellent for hanging baskets and mixed containers, and also performs well as a low-growing groundcover. No need for pinching or PGRs. H: 5-10 cm.

GAILLARDIA ARISTATA

Kokarde/Blanket Flower

GOBLIN: Smuk staude til produktion forår/sommer med salg i juli-august til udplantning i krukke og bede. Også til produktion i 15-18 cm potter med 3 planter pr. potte. H: 35 cm.

GOBLIN: Beautiful perennial for production in spring/summer with sale in July/August for planting in containers and beds. Also for production in 15-18 cm pots with 3 plugs per pot. H: 35 cm.

GERBERA JAMESONII

Pottegerbera/Pot-Gerbera

FESTIVAL F1: Potteplante, men kan også anvendes til udplantning på et beskyttet sted f.eks. i udestuer og krukker på terrassen. Stor ensartethed i blomstringstidspunkt. Dette sikrer en nem kulturplanlægning, et minimalt sorteringsarbejde og en kort salgsperiode. Mange stilke pr. potte samt en kompakt og ensartet vækst sikrer et flot slutprodukt. Stort sortiment: Både med og uden øje samt halvfyldte, spidertyper og minier.

Til de producenter, der ønsker at producere Festival i blanding, har vi sammensat to specialblandinger. En sommerblanding og en vinterblanding (til produktion m/tilskudslys). Disse to blandinger sikrer producenten en enartet salgsvare m.h.t. plantestørrelse, retarderingsmåde og kulturtid.

FESTIVAL F1: Pot plant, but also suitable for planting on a sheltered spot for instance in patio containers or in conservatories. Large uniformity in flowering time. This ensures easy crop planning, a minimum of sorting and a short sales period. Many stems per pot and a compact and uniform growth ensures a beautiful finished product. Large range: Both with and without eye, semi-doubles, spiders, and minis.

For producers, who wish to produce Festival in mixture, we have composed two special mixtures. A summer mixture and a winter mixture (for production with additional light). These two mixtures ensure the producer an uniform finished product as to plant size, growth regulation method, and crop time.

PORTULACA GRANDIFLORA

Solportulak/Portulaca

SUNSEEKER: Farvestrålende, halvfylldt serie. Sunseeker grener sig godt fra basis og giver derfor nogle kraftigere planter på salgstidspunktet. Serien har en mere opret vækst end andre Portulaca på markedet, og er derfor lettere at pakke og transportere. Trives godt på et solrigt sted i udestuer og krukker. Et særligt eksklusivt produkt kan fås ved at producere Sunseeker i større pletter med flere planter pr. potte.

SUNSEEKER: Colourful, semi-double series. Sunseeker branches well from the base and provides a fuller pot at the time of sales. The series has a more upright habit than other Portulacas on the market, and is therefore easier to handle and ship. Sunseeker thrives well on a sunny spot in patio containers and conservatories. An exclusive product can be made by producing Sunseeker in larger pots with more plants per pot.

VIKING F1: Storblostmret serie forædlet i Danmark og derfor særligt velegnet til produktion under Nordeuropæiske forhold. Serien har den hurtigste produktionstid på markedet. Planterne har en kraftig, velforgrenet vækst samt stærke, kompakte blomsterstilke, der viser blomsten flot. Yderst velegnet til produktion i både bakker og pottes.

VIKING F1: Large-flowered series bred in Denmark and therefore especially suitable for production in Northern Europe. The series has the fastest crop time on the market. The plants have a vigorous, well-branched growth habit and strong, compact flower stems, holding the flower upright for optimal colour display. Highly recommended for production in both packs and pots.

PROFUSION: Spændende udplantningsplante - også velegnet til det sene udplantningsplantesalg. Blomstrer rigt og vedvarende med halvfyldte blomster. Sund serie. H: 15-20 cm.

PROFUSION: Exciting bedding plant - also suitable for the later bedding plant sales. Flowers richly and continuously with semi-double flowers. Healthy. H: 15-20 cm.

ZINNIA X HYBRIDA

Frøkenhat/Zinnia

PROFUSION DOUBLE: Dobbeltblomstrende. Samme gode kvalitet som den anerkendte Profusion serie.

PROFUSION DOUBLE: Double flowering. Same good quality as the highly rewarded Profusion series.

PROFUSION KNEE-HIGH: Serien har en mere kraftigt voksende og vegetativ vækst end Profusion. Den er tørketålende og velegnet til udendørs beplantning. Klarer sig også godt i koldere klima endda efter udplantning under våde og kolde forhold.

PROFUSION KNEE-HIGH: The Profusion Knee-High series has a more vigorous vegetative growth than the regular profusion series. It's well suited for landscape use and for low water, low maintenance gardens. Highly tolerant in cool summer climates even after planting out in wet and cool conditions.

Cherry & Ivory

SWIZZLE™: Store, tofarvede helt fyldte blomster. Cherry & Ivory har kirsebærrøde kronblade med creme spidser, mens Scarlet & Yellow har skarlagenerøde kronblade med guldgule spidser. Busker sig godt.

SWIZZLE™: With large, bi-coloured fully-double flowers. Cherry & Ivory has cherry red petals with cream-coloured tips, while Scarlet & Yellow has scarlet petals with golden tips. Bushes well.

Betaling

Leverede varer forfalder til betaling 30 dage efter fakturadato.
Ved betaling inden for 8 dage ydes 2% kontantrabat.
Ved betaling efter forfaldsdato beregnes 1,5% rente pr. påbegyndt måned

Levering

Levering sker af Frisa
Alle leveringstidspunkter er +/- 8 dage
Normalt benyttes CC-containere til alle leverancer fra Frisa Planter.
Principielt:
Levering sker under forbehold for force majeure. Vi garanterer ikke for forsinkelser, som skyldes omstændigheder vi ikke har indflydelse på.
Forsendelser er for købers regning og risiko, hvis ikke andet er aftalt skriftligt.

Forsinkelse af leverancer

I tilfælde af svigtende produktion, eller svigtende leverancer, forbeholder vi os ret til at levere en tilsvarende sort.
Der tages forbehold for at produktionen forløber tilfredsstillende, leverancer fra underleverandører samt omstændigheder vi ikke har indflydelse på (f.eks. ekstremt vejrlig).

Reklamationer

Reklamationer skal ske senest 2 dage efter varens modtagelse.
Der gives ingen garanti for videre vækst og vækstegenskaber efter levering af varen, idet vejr, dyrkningsmetode og dyrkningsforhold er vigtige faktorer for resultatet.

Erstatninger

Principielt:
Evt. erstatninger kan ikke overstige fakturabløbet på de leverede planter.
Reklamationer vedr. vækstproblemer og skader skal bevises af kunden, og han skal dokumentere at skaden ikke skyldes forkert dyrkning, vejrliget, sygdomme, skadedyr eller andre faktorer, som er uden for vores kontrol.

Dyrkningsvejledninger og illustrationer

Frisa Planter garanterer ikke for dyrkningsvejledninger og skemaer i kataloget.
Disse er kun ment som vejledende, idet vejrforhold og dyrkningsteknik har afgørende indflydelse på resultatet.
Illustrationer og deres farvenuancer er eksempler, og kan variere i forhold til virkeligheden.

Tvister

For al handel er kun den danske lov gældende.
Evt. tvister afgøres af Voldgiftsinstituttet

Payment

Our payments are due 30 days after the invoice date. When payment is made within 8 days we allow a 2% discount. For late payment, we add 1.5% every month.

Delivery

All deliveries are ex works, ex Auning.
All delivery dates can be +/- 8 days of the date stated.
The delivery will normally take place via CC-containers directly from Frisa Planter.
Principally:
The delivery will take place subject to force majeure. We are not liable for continued delays caused by the "act of God", war, weather crisis and other circumstances that are beyond our control.
All consignments will be carried out at the customer's risk and paid for by the customer.
We reserve the right to decide the type of consignment (we will try to do most efficiently), providing that nothing else is stated between the dealing partners. All prices are ex works. The customer must organise transport insurance themselves if they desire.

Delivery delay

In the case that an ordered item is out of stock or not obtainable, we reserve the right to send a similar variety as a replacement, except if the customer has noted, "no substitutions/replacements wanted".
In the case of insufficient production, crop failure or delivery delays of our suppliers, we reserve the right to deliver on a pro rata basis or to completely cancel the order.

All orders will be subject to: Satisfactory production results, "Act of God" and circumstances, which are beyond our control, as well as the delivery from our suppliers, these can all affect the completion of the order and the date.

Complaints

Complaints should be made from the customer's desired place of delivery two days after receipt of delivery.
Once the goods have been handed over, we do not guarantee further growth and further growth characteristics, as the varying weather and cultivation conditions are very important factors or the results of the growth.

Substitution of payment or goods

Principally:
For every sale of young plants, in agreement with the corresponding rules, we can only agree to substitutions for errors and defects such as authenticity, growth damage, and similar problems.
Under no circumstances whatsoever will we allow the damage complaints to exceed the price of the goods in question on the invoice. Concerning the substitution of the invoice price, we do not guarantee any further substitutions or replacement services. No liability will be taken for any further possible damage and/or loss.
Complaints concerning growth damage must be proved and the customer must show that wrong cultivation, weather conditions, disease or pests and/or other factors, which are out of our hands, have not caused the damage.

Growing instructions and illustrations

Frisa Planter does not guarantee the growing instructions and tables in the catalogue. These are only meant as guidance, as the weather conditions and cultivation techniques can have a decisive influence on the condition and growth of the plants. Illustrations and their colours are merely examples and are subject to the usual variations.

Disputes

Any dispute arising out of this Agreement or its interpretation shall be settled in pursuance of Danish law and be brought before the Danish Arbitration (in Danish: Voldgiftsinstituttet) in accordance with its rules as the first instance.
